DATE MAILED: 08/10/2006				

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)
	10/643,516	PAYNE, J. DAVID
	Examiner	Art Unit
	Nghi V. Tran	2151

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 19 August 2003.
- 2a) This action is FINAL. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-11 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1-11 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) <input checked="" type="checkbox"/> Notice of References Cited (PTO-892)	4) <input type="checkbox"/> Interview Summary (PTO-413)
2) <input type="checkbox"/> Notice of Draftsperson's Patent Drawing Review (PTO-948)	Paper No(s)/Mail Date. _____.
3) <input checked="" type="checkbox"/> Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08) Paper No(s)/Mail Date <u>2/27/04, 2/9/05, & OS/31/05</u>	5) <input type="checkbox"/> Notice of Informal Patent Application (PTO-152)
	6) <input type="checkbox"/> Other: _____.

DETAILED ACTION

Specification

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1 and 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Lew et al., U.S. Patent Application Publication No. 2004/0210472 (hereinafter Lew).

4. With respect to claim 1, Lew teaches a method for managing data [see abstract] including the steps of:

- (a) creating a questionnaire [i.e. survey] comprising a series of questions [paragraphs 0005-0009];

(b) tokenizing said questionnaire [i.e. encrypted survey information, paragraph 0013]; thereby producing a plurality of tokens representing said questionnaire [paragraphs 0005-0009];

(c) transmitting said plurality of tokens to a remote computing device [i.e. the survey transmitter may transmit to the remote responding device in either a wired or a wireless manner, paragraph 0053];

(d) executing at least a portion of said plurality of tokens representing said questionnaire at said remote computing device to collect a response [i.e. feedback] from a user [i.e. feed back from a user, paragraph 0036];

(e) transmitting at least a portion of said response from the user to a server [i.e. a central facility] via a network [paragraph 0050]; and

(f) storing said response at said server [i.e. all feedback is transmitted to the central facility, **S6100** of fig.2 and paragraph 0048].

5. With respect to claim 5, Lew further teaches wherein the transmission of said tokens in step (c) occurs via the network of step (e) [fig.3].

6. Claims 7 is rejected under 35 U.S.C. 102(e) as being anticipated by Sendowski et al., U.S. Patent Application Publication No. 2003.0198934 (hereinafter Sendowski).

7. With respect to claim 7, Sendowski teaches a method for collecting survey data from a user [see abstract] comprising:

- (a) designing a questionnaire [i.e. survey] having branching logic [i.e. branch script object, 124] on a first computer platform [i.e. web server, 121] [paragraphs 0023-0028 and 0041-0048];
- (b) automatically transferring said designed questionnaire to at least one loosely networked computer [i.e. automatically generate an HTML question page or question form, paragraphs 0024-0031];
- (c) executing said transferred questionnaire on said loosely networked computer, thereby collecting responses from the user [see abstract];
- (d) automatically transferring via the loose network any responses so collected to a central computer [i.e. medical survey provider 120] [paragraph 0020 and table 3]; and,
- (e) making available on the Web any responses transferred to said central computer in step (d) [fig. 1].

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claims 2-4, 6, and 9-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lew as applied to claim 1 above, and further in view of Sendowski et al., U.S. Patent Application Publication No. 2003/0198934 (hereinafter Sendowski).

10. With respect to claim 2, Lew does not explicitly show the step of: (g) translating said response to a format recognizable by a particular computer program; and (h) accessing the translated response from a computer executing said particular computer program.

In a method for managing data, Sendowski suggests the step of: (g) translating said response to a format recognizable [i.e. XML data structural] by a particular computer program [i.e. branching script engine, paragraphs 0007-0008]; and (h) accessing the translated response from a computer executing said particular computer program [paragraphs 0034-0053 and fig.2].

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify Lew in view of Sendowski by accessing a translated response to a format recognizable by a particular computer program because this feature provides a framework of reusable software object implementing the creation and execution of any question-answer branching scripts [Sendowski, see abstract]. It is for this reason that one of ordinary skill in the art at the time of the invention would have been motivated in order to support thousands of concurrent users when it is required [Sendowski, paragraph 0005].

11. With respect to claim 3, Lew does not explicitly show wherein step (a) includes the substeps of: (a) creating a questionnaire by:

(i) entering a series of questions into a questionnaire design computer program;

- (ii) identifying within said questionnaire design computer program the type of response allowed for each question of said series of questions; and
- (iii) identifying within said questionnaire design computer program a branching path in said questionnaire for each possible response to each question of said series of questions.

In a method for managing data, Sendowski suggests wherein step (a) includes the substeps of: (a) creating a questionnaire by:

- (i) entering a series of questions into a questionnaire design computer program [paragraphs 0034-0054];
- (ii) identifying within said questionnaire design computer program the type of response allowed for each question of said series of questions [i.e. answer types, paragraph 0019 and table 2]; and
- (iii) identifying within said questionnaire design computer program a branching path in said questionnaire for each possible response to each question of said series of questions [paragraphs 0018 and table 1].

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify Lew in view of Sendowski by identifying within said questionnaire design computer program a branching path in said questionnaire for each possible response to each question of said series of questions because this feature provides a framework of reusable software object implementing the creation and execution of any question-answer branching scripts [Sendowski, see abstract]. It is for this reason that one of ordinary skill in the art at the time of the invention would have

been motivated in order to support thousands of concurrent users when it is required [Sendowski, paragraph 0005].

12. With respect to claim 4, Lew does not explicitly show (i) assigning at least one token to each question of said series of questions; (ii) assigning at least one token to each response called for in said series of questions to identify the type of response required; and (iii) assigning at least one token to each branch in said questionnaire to identify the required program control associated with said branch.

In a method for managing data, Sendowski suggests (i) assigning at least one token to each question of said series of questions [i.e. a question uses tokens, paragraph 0019]; (ii) assigning at least one token to each response called for in said series of questions to identify the type of response required [i.e. allows the answer to be collected into a name token, paragraph 0020]; and (iii) assigning at least one token to each branch in said questionnaire to identify the required program control associated with said branch [paragraphs 0041-0049].

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify Lew in view of Sendowski by assigning at least one token to each question of said series of questions, to each response called for in said series of questions, and to each branch in said questionnaire because this feature provides a framework of reusable software object implementing the creation and execution of any question-answer branching scripts [Sendowski, see abstract]. It is for this reason that one of ordinary skill in the art at the time of the invention would have

been motivated in order to support thousands of concurrent users when it is required [Sendowski, paragraph 0005].

13. With respect to claims 6 and 9, Lew teaches a method for managing data transfers between computers [see abstract and fig.1] including the steps of:

- (a) creating a questionnaire [i.e. survey] at a first site [i.e. modulator 10] in a first computer [i.e. media conveyor 20] located at a second site [paragraphs 0026-0029], said first site and said second site being connected by a network [fig.1];
- (b) transmitting said question to a remote computer [i.e. remote responding device] via said network, said remote computer running an OIS [paragraph 0053];

However, Lew does not explicitly show modifying said questionnaire with incremental changes at a third site in said first computer located at said second site; and modifying said questionnaire in said remote computer with said incremental changes.

In a method for managing data, Sendowski modifying said questionnaire with incremental changes at a third site in said first computer located at said second site [i.e. TSLastModified of table 2 and paragraph 0058]; and modifying said questionnaire in said remote computer with said incremental changes [i.e. TSLastModified of table 2 and paragraph 0058].

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify Lew in view of Sendowski by modifying said questionnaire with incremental changes at a third site in said first computer located at

said second site; and modifying said questionnaire in said remote computer with said incremental changes because this feature provides a framework of reusable software object implementing the creation and execution of any question-answer branching scripts [Sendowski, see abstract]. It is for this reason that one of ordinary skill in the art at the time of the invention would have been motivated in order to support thousands of concurrent users when it is required [Sendowski, paragraph 0005].

14. With respect to claim 10, Lew further teaches wherein said first site and said third site are the same [fig.1].

15. With respect to claim 11, Lew further teaches wherein said third site is at said remote computer [fig.1].

16. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sendowski et al., U.S. Patent Application Publication No. 2003/0198934 (hereinafter Sendowski), in view of Joao, U.S. Patent Application Publication No. 2001/0056374 (hereinafter Joao).

17. With respect to claim 8, Sendowski does not explicitly show assessing a charge for each transferred response received by said central computer.

In a method for collecting survey data, Joao discloses assessing a charge [i.e. compensation, rewards, rebates and/or incentives can be provided for viewing,

reviewing, participating in and/or interacting with, the entire survey, poll and/or questionnaire, paragraph 0230] for each transferred response received by said central computer [paragraphs 0228-0037].

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify Sendowski in view of Joao by assessing a charge for each transferred response received by said central computer because this feature can receive compensation, a reward, a rebate, and/or an incentive [Joao, paragraph 0009]. It is for this reason that one of ordinary skill in the art at the time of the invention would have been motivated in order to facilitate commerce between any parties and/or any number of parties [Joao, paragraph 0009].

Conclusion

18. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - a. "Web based voting tracking and reporting system," by Scott, U.S. Patent Application Publication No. 2004/0117244.
19. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nghi V. Tran whose telephone number is (571) 272-4067. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Zarni Maung can be reached on (571) 272-3939. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
